

Word of Mouth™

Temple wearable for overnight vitals → jaw-load awareness

Stage A now: patent-implementing **wellness wearable**. Stage B later:
medical device pathway — not claimed today.

Stage A

Wellness · temple · patient
app

Stage B

Medical device — later gate

Entity

JAC Dental Solutions Ltd
(Ireland)

Jaw load is a real overnight problem — measured in the wrong place

- **Rings / watches** — general wellness at finger/wrist; wrong site for jaw load
- **Clinic EMG** — accurate but episodic, expensive, not overnight consumer
- **Gap** — no continuous at-home optical + motion record of jaw hemodynamics

Condition-specific problem at an unusual anatomical site — not “another sleep tracker.”

Oralable = temple clip + magnetic case + iOS patient app

NOW (PHASE 0)	NEXT (PHASE 1+)	LATER (STAGE B)
Temple HR + SpO₂ · honest device state · Gen1 pilot	IR-DC, TFI, SASHB in patient app · patent embodiment	Cleared / CE medical device · separate gate

Physics: PPG + IR-DC hemodynamic occlusion + jaw accelerometry — not sEMG, not a ring, not Gen1-intraoral.

Working stack · IP path · open evidence pipeline

- **Working Gen1** — hardware, firmware, and patient app on a field path
- **IP (high level)** — EP foundation patent **granted** · US utility in continued prosecution · US provisional on muscle-activity refinements
- **Open 50 Hz pipeline** (Swift + Python) — embodiment and evidence, not a black-box ring
- **Orthogonal to rings** — same sensor classes, different physics (jaw / temple)

What exists today (August 2026)

ITEM	SPEC
Clip	Gen1 · REV10 · ES2832AA2 (nRF52832)
Charge	Oralable magnetic case — not Qi / MagSafe
Firmware	1.0.82 (IR-pulse worn · STAT blink = charging)
App	Patient 4.3.3 TestFlight · dentist app off for pilot
Placement / claims	Temple · wellness only — not a medical device today
Handoff	Research Kits gated — target 5 to Pedro by 31 Aug 2026 (charge-to-temple + short worn vitals)

Ready ≠ delivered

EVIDENCE	STATUS
Gen1 + FW 1.0.82 + app 4.3.3	Stack ready
Ed/Pedro Research Kits	Pending ship — 5 kits target 31 Aug 2026
Live MAU / MRR	Near zero — soft launch gated
Funding to date	Founder-loan funded · cash thin
Board	Founder + Independent Director (Amstrow)

First customer-validation evidence = patient pilot sessions.

What can actually bill — in order

- **Hardware** (clip + case) — now / pilot, low volume
- **Consumer Premium IAP** — after credible Phase 0–1+ dashboard
- **Dentist / practice IAP** — after Phase 1+ share (later)
- **Cleared device (Stage B)** — separate regulatory gate

Pilot = patient app only. No medical claims in Stage A marketing. Ireland / UK first.

Technical founder in place. Commercial hole is the work.

ROLE	WHO
Founder / Exec Chair	John Cogan — product, firmware, apps, IP. Trinity PhD. BiancaMed / ResMed remote monitoring.
Board	Founder + Independent Director (Amstrow)
Commercial CEO	Open search — founder stays Exec Chair on product and IP

The hole is GTM, fundraising, and day-to-day commercial leadership — not the sensor stack.

What we want from Tech Operators

- **Pitch slot** — Point B pre-seed bridge of about **€180k** (F&F €50k + EI PSSF €100k CLN + HPSU €30k) by **31 Oct 2026**
- **Meitheal** — first paid nights in Ireland / UK without overselling medical claims
- **Intros** — commercial CEO candidates; operators who have shipped wearables or health-adjacent hardware

F&F

€50k

priced equity

EI PSSF

€100k

CLN

HPSU

€30k

grant

Valuation and share terms stay open. Detail under NDA / board process.

Word of Mouth™

Working wearable first. Medical claims later.

Point A: Gen1 temple stack in pilot; wellness-only; patent path live; founder-funded. Point B: pilot evidence → honest Stage A soft launch → next round when evidence allows.
